

Mack Daddy Honeycomb Pallets

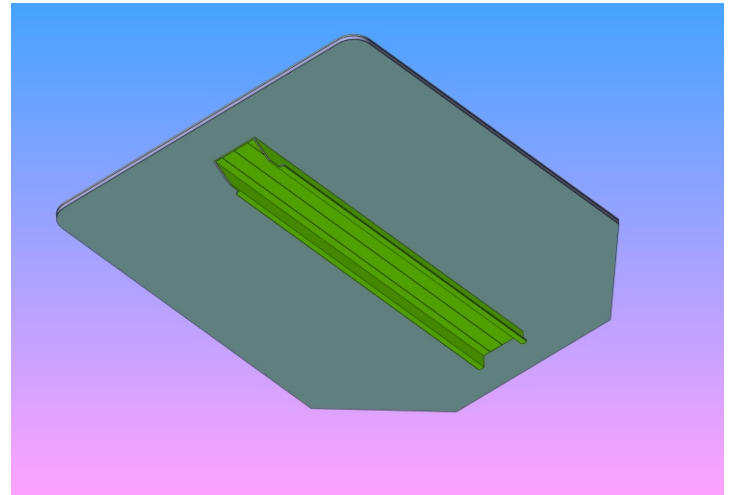

Honeycomb Aluminum & Soft Top Rubber

The Mack Daddy pallet is for Jumbo Printing that requires a pallet wider than 24 inches

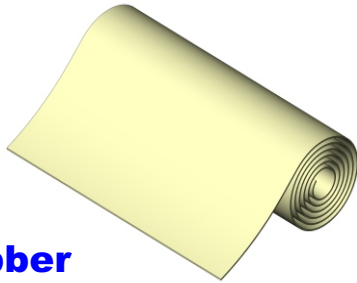

Introducing the Mack Daddy - Ultra Super Pallet. It's the very best jumbo pallet that money can buy. It's made using ultra-lightweight, incredibly flat $\frac{1}{2}$ " honeycomb aluminum.

This is the same material we have always used for making MHM Style Pallets and has proven itself exceptional for large format pallets. Available with or without Soft-Top Rubber. Special Shaping matches the shoulder angle of a standard t-shirt.

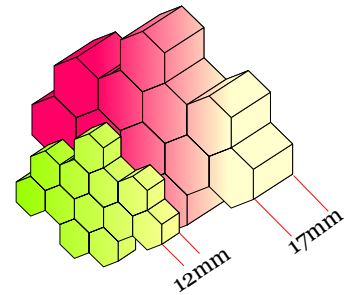

Available for use on almost all manual & automatic textile printing machines

**Soft-Top
Pallet Rubber**

Honey-Comb Core

Honeycomb Aluminum

Honeycomb Aluminum is a remarkable material. It is incredibly light weight, flat, and rigid. For large format jumbo sized pallets, it's the very best choice of materials. We have been manufacturing pallets using this material since 1992. While we & other suppliers have used thinner and thicker materials, we have standardized to our $\frac{1}{2}$ " thick honeycomb. Through the many years of field testing, we have found this special composite to be the very best combination of size and strength.

- ➔ **Weight** - Our $\frac{1}{2}$ " thick Honeycomb is one-fourth the weight of our $\frac{1}{4}$ " solid aluminum. This results in many benefits such as increased indexing speed & less machine fatigue.
- ➔ **Flatness** - The material is so flat, that we now rely on it as a flatness calibration tool. When the pieces are stacked, a vacuum seal is effected. For large pallets, there's no better material.
- ➔ **Rigid** - An 8 foot by 4 foot sheet of honeycomb can be supported at it's center point and not bow. For jumbo sized pallets, there is no better material.
The addition of Soft Top Rubber to these honeycomb aluminum pallets make them the very best jumbo pallet that is available today
